

Resource	URL	Platform	Description	Use Cases	UI Notes
Wildfire Enterprise Geospatial Portal (EGP)	Wildfire EGP	Esri-based	The authoritative interagency portal for wildfire situational awareness. Provides fire perimeters, weather, detections, and resource tracking.	Decision makers: monitor active incidents, allocate resources. GIS admins: integrate authoritative fire data into enterprise systems.	Rich data layers, 2D/3D views, live cameras. Interface can feel dense for new users.
FEMA Wildfire Dashboards	FEMA Geospatial Resource Center – Wildfires	Esri Hub	National dashboards showing wildfire activity over the past 7 days and historical trends.	Decision makers: situational awareness for emergency response. GIS admins: authoritative federal data feeds for integration.	Clean dashboard layout, historic + current data. Limited customization for local analysis.
InciWeb – Incident Information System	InciWeb	Non-Esri	Official interagency incident reporting system for wildfires and other disasters. Provides maps, updates, and closures.	Decision makers: public communication and incident coordination. GIS admins: authoritative incident metadata, but less direct GIS integration.	Clear incident summaries, public-friendly. Map tools are basic compared to Esri dashboards
